

Remove comments

This flowchart shows the basic logic behind the parsing.

Based on current state:

Based on character:

Notes:

- cmt = comment
- T = true
- F = false
- isQuotedString : does the current character belong a to a quoted string?
 - A character belongs to a quoted string (isQuotedStrig = true)
 - B character belongs to a quoted string (isQuotedStrig = false)

(princ "\nA")(B xxx xxx)
